Semiconductor Production Equipment

Semiconductor devices are broadly used in mobile devices, such as smartphones and tablets, as well as the data centers that are indispensable for the processing of big data. With the arrival of the IoT, semiconductor applications will expand in all fields, from consumer electronics and automobiles to medicine and healthcare. Tokyo Electron provides a wide range of semiconductor production equipment used to manufacture such semiconductors along with reliable technical support and service. The main categories of our product line-up are coater/developers, etch systems, deposition systems and cleaning systems used in wafer processing as well as wafer probers used in the wafer testing process. In addition, we also offer such products as wafer bonders/debonders used in advanced packaging processes.

FPD Production Equipment

Flat panel displays (FPDs) are an essential part of everyday life, employed in such products as TVs, smartphones and tablets. Going forward, applications for FPDs are expected to expand even further with the adoption of flexible displays. Tokyo Electron supplies coater/developers and etch/ash systems for manufacturing FPDs along with solid technical support and service. We also offer inkjet printing systems for producing FPDs to take advantage of the expanding OLED display market.

The amounts in this report are in billions, millions and thousands of yen; thousands of U.S. dollars; and thousands of shares as of and for the years ended March 31, 2016 and onward, including year-on-year differences, are rounded to the nearest unit. Such amounts as of and for the years ended March 31, 2017 and onward do not necessarily agree with the sum of the corresponding individual amounts.
